To whom it may concern,

I am an undergraduate student completing a B.A. with a Specialization in Pure and Applied Mathematics. My passion for mathematical modeling, prediction, and statistical data analysis has led me to machine learning and data science. However, I was not always into math — I actually began my degree in psychology, but felt there was something missing. Two years ago, out of curiosity, I picked up a calculus textbook. I could not complete the exercises, but I was hooked. I taught myself the prerequisites, and worked my way up to that textbook and beyond, to rigorous, proof-based math. I love the theoretical aspects of it, but what really drives me is the ways math can be applied to solving real-world problems. My experience with the Space Concordia team showed me what it means to work with real data — it's a challenge I love, and that's why working for Ceridian appealed to me right away. The problems you contend with are pressing, difficult, and important — I'd be honoured to work on them alongside your team.

Best,
Étienne Dyer
